USB MECHANICAL KEYBOARD

Thank you for purchasing a brand new officially licensed Amiga product. The Amiga USB Mechanical Keyboard is compatible with Windows, Linux and Mac computers plus various next generation Amigas (such as PPC-based MorphOS or AmigaOS 4.1 systems).

This product is primarily intended for use with modern PCs, FPGA-based devices and emulation setups - offering a premium typing and gaming experience. We do hope you enjoy it.

**Note: An adaptor to allow this input device to be used with legacy Commodore Amiga computers (such as A2000-A4000, CDTV and CD32) will be made available soon, as well as keycaps for additional language variations. Visit: [www.simulant.uk/shop/](http://www.simulant.uk/shop/)**

Multimedia function shortcuts can be accessed by holding the right  key and pressing F1 to F12. (Assuming key positions match the default PC layout pictured above. The Alt and  key positions can be swapped and remapped in order to achieve a legacy Amiga layout if required.)
